Library Management System

1. Introduction

Library Management System is a software application developed using PHP and MySQL. It helps to manage library operations such as adding books, issuing books, and returning books.

2. Objective

The main objective of this project is to automate the library system and make it easy to manage records efficiently.

3. Features

- Add Books
- View Books
- Issue Books
- Return Books
- Login System

4. Technology Used

Frontend: HTML, CSS
Backend: PHP
Database: MySQL

5. Database

The database is created using MySQL and contains tables for books, users, and issue records.

6. Conclusion

This system reduces manual work and improves efficiency in managing library records.
